

## **Recognition Letter for Jereh Cuttings Re-injection Service on WHP-B**

**To Parker Wang, Jereh**

In the past year, Jereh CRI crew have provided excellent performance on cuttings re-injection services, black water injection service, waste drilling mud injection service, pressure testing and associated well completion assistance. I have been very impressed with Jereh's high safety awareness, positive work attitude and teamwork.

Jereh have made a great contribution to our safety performance, working without any recordable accident. This has been achieved by following good HSE practices, making announcements before each high pressure job, correctly following PTW and log out/tag out before CRI PM and holding toolbox meeting before each job.

The offshore crews have set a high level of housekeeping, operation and PM for CRI equipment has kept CRI equipment in very good condition, which has eliminated a lot of my concerns of CRI shutting down drilling operations. Through their teamwork efforts, the Jereh crews have established a harmonious working environment with the other service companies, which makes drilling operations run more safely, efficient and smooth.

Thanks again for Jereh's great job to make the CRI services safe & reliable on WHP-B. Please pass on my thanks to all Jereh employees involved in WHP-B operations and request you continue to work to the high standards you have set.

Yours sincerely

David Forbes
